Sean,

When we went through the review process of that bathymetry HASP addendum we had them added PPE and procedures for the Jet Ski and ROV use specific to contact with contaminated sediment and surface water. Their revised document addressed those issues.

Oh for goodness sake. They couldn't get this done via lidar I take it, that would have been more accurate, which is too bad.

A HASP addendum is needed with physical hazard issues explained in the THA, as well as biological, e.g. work stoppage for sewage overflow? Etc.

Thank you.

S

Subject: Bathymetry work with jet skis

Davis,

I am writing to notify EPA that the Pre-RD Group will soon be performing additional field work to collect Bathymetry data on personal water craft (jet skis), as described in the approved Field Sampling Plan. We are working to get the field team remobilized as soon as possible due to decreasing water levels. I will let you know a date/time for work as soon as I am able. The jet skis do not have room for an observer directly on the watercraft. Please let me know what additional coordination/logistics is needed prior to this bathymetry field work.

Thanks

Jenny
